ONOCRA TECHNICAL ARCHIVE

DIAGNOSTIC & TROUBLESHOOTING PROTOCOLS FOR TABLET SYSTEMS

Overview: This archival guide acts as a formal technical manual for diagnosing, managing, and maintaining tablet architectures, including iPadOS, Android, and Windows Surface systems. Ensure all steps follow native device policies before initializing structural overrides.

1. Core OS & Hardware Diagnostics

- **Forced Reboots & DFU Modes Matrix:** Step-by-step physical button combinations required to hard-reset unresponsive or frozen systems across major bootloaders (iPadOS, Android, and Windows Surface UEFI).
- **Touchscreen Digitizer & Dead Zone Maps:** Guides for accessing native and third-party multi-touch test suites to identify hardware dead zones versus localized software lag.
- **Ecosystem Power Cycle Procedures:** Diagnostic workflows differentiating a completely depleted battery, a damaged charging circuit, and an OS failure that mimics a "dead" device.

2. Connectivity & Peripheral Interfaces

- **Wireless Radio Stack Flushes:** Procedures for clearing network handshakes, resetting network settings, and tracing IP/DNS configuration errors causing Wi-Fi drops.
- **Active Stylus Calibration Matrix:** Troubleshooting protocols for protocol-specific input styluses (Apple Pencil, Samsung S-Pen, Microsoft Surface Pen) addressing jitter, pairing breaks, and pressure-sensitivity failures.
- **External Keyboard & Docking Faults:** Guides for addressing pin alignment, Bluetooth connection failures, and driver-level keyboard mapping errors on attachable workstation accessories.

3. Storage, Application, & Lifecycle Integrity

- **Virtual Memory Allocation & Cache Sweeps:** Systematic documentation on safe storage thresholds, background app limits, and how to safely clear application data without data loss.
- **Device Handshake & Time-Sync Manuals:** Diagnostic steps showing how incorrect device time-stamping breaks modern SSL/TLS security certificates, leading to app-wide connection errors.
- **Ecosystem Backup & Native Cloud Migration:** Definitive checklists for total data preservation, cloud isolation, and sandboxed device-to-device transfers before deploying hard factory resets.

4. Configuration & Deployment Policies

- **MDM & Parental Restriction Lockouts:** Diagnostic checklists for addressing broken supervisor profiles, resetting local screen time passwords, and isolating app restriction bugs.
- **Display & Panel Overrides:** Steps for correcting software-forced display caps, color-space distortions, and power-saving overrides that restrict hardware panel outputs.
